

eMail Archival, Discovery & Compliance

(Lotus Notes or Microsoft Exchange eMail Archive)

Every day, more organizations need to manage e-mail, instant messages and attachments to support regulatory compliance, litigation and corporate policy and to improve IT performance and productivity.

The infrastructure costs to manage the growing volumes of emails and attachments can negatively impact the performance of the Lotus Domino or MS Exchange email systems.

To resolve these issues companies traditionally allocate more and more money to purchase disk to resolve email storage needs, without considering alternative and more cost effective solutions that suit both your company email storage and compliance needs.

Some key email issues your organisation may be facing:

- o Does your company suffer the ever increasing cost of constantly buying new disk to manage your emails?
- o Is your company suffering from decreasing response times of your Lotus Notes or MS Exchange system due to size of your email database and backup requirements?
- o Is your organisation spending considerable time and money searching for emails and attachments for regulatory investigation purposes?
- o Does your company have a legal responsibility to capture and store emails for lengthy periods of time for audit, legal and compliance requirements?

This out of the box eMail Archiving, Discovery & Compliance offering includes: -

Offloading emails and attachments from the email server to a central low cost storage destination.

Enterprise wide email and attachment search and retrieval based on natural language searches using a dedicated Discovery tool.

Enables end-users to retrieve archived emails and attachments easily and quickly from their email client.

Capturing inbound, outbound emails and internal messaging directly from the SMTP data source for compliance and regulatory requirements.

Secure and non editable capture of emails and attachments to ensure regulatory compliancy.

'Fixed Price' £32,000

eMail Archiving, Discovery & Compliance

(Lotus Notes or Microsoft Exchange eMail Archive)

IBM® Content Management for Message Monitoring and Retention enables customers to archive emails and attachments from Lotus Domino or Microsoft Exchange to a secured archive repository for long-term low cost storage and immediate retrieval. File attachments can also be separately archived from their originating email messages to provide immediate mass disk savings. Some customers have enjoyed up to 80% disk savings off key Lotus or Exchange users just from attachment archiving. This is a particularly useful function given that email attachments are the biggest email storage space consumer.

- automatically capture e-mail, attachments and optionally instant messages
- store content and index data securely in non-erasable format
- enforce retention periods and destruction rules
- search and retrieve content for surveillance and investigation
- provide full supervisory access to system data, indices, and activities
- record detailed audits of all correspondence

IBM® Content Management for Message Monitoring and Retention is a bundled package of software which includes the following components: -

- DB2 Content Manager for Multiplatforms
- DB2 CommonStore for Lotus Domino or MS Exchange
- Tivoli Storage Manager Extended Edition
- WebSphere Application Server
- iLumin Assentor Archive & Discovery

We have not included a storage device within this offering as many customers have existing storage solutions that could be used, such as an existing tape or optical storage. We would be pleased to provide low cost large volume storage designs and costing that meet your archive space and performance needs if required.

We provide an end to end eMail Archiving, Discovery & Compliancy Solution.

Included within this Smooth Start fixed price offering.

Software Components in the Integritie fixed price: -

- 100 x IBM Content Management for Message Monitoring and Retention user licences (one per email user)
- 100 x iLumin Assentor Message Manager for Content Manager licences (one per email user)
- 100 x iLumin Assentor Discovery for Content Manager licences (one per email user)

Services Components in the Integritie fixed price: -

The end to end services required to deliver a total eMail Compliance and Archival solution. Refer to the Integritie Scope of Work for customer deliverables and completion criteria.

Additional Notes: -

- Integritie will invoice 50% upon commencement of the project followed by a final 50% payment upon completion. Travel and subsistence expenses charged at cost.
- This offering is made with the understanding that the solution will be integrated with your existing Lotus Domino or MS Exchange servers and backend storage tape or optical unit.
