

eMail Archiving & Compliance (Lotus Notes or Microsoft Exchange eMail Archive)

As e-business continues to grow, company's in today's climate rely heavily on email and associated attachments to conduct their day-to-day operations.

Additionally many company's are now required to keep emails for legal, audit, and compliance needs.

The infrastructure costs to manage the growing volumes of emails and attachments can negatively impact the performance of your email system.

To resolve these issues company's traditionally allocate more and more money to purchase disk to resolve email storage needs, without considering alternative and more cost effective solutions that suit both your company email storage and compliance needs.

Some key email issues your organisation maybe facing:

- o Does your company suffer the ever increasing cost of consistently buying new disk, and storage to manage your emails?
- o Is your company suffering from decreasing response times of your Lotus Notes system created by the size of your email system and backup requirements?
- o Does your company have issues with the man effort and controls required to clean up and manage email file allocation rules?
- o Does your company have a legal responsibility to store emails for lengthy periods of time for audit, legal and compliance requirements?

This out of the box eMail Compliance & Archiving offering includes:

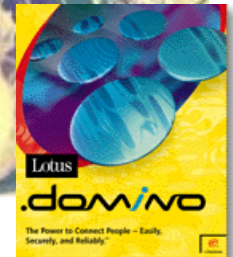

Offloading emails and attachments to a central low cost storage destination.

Securely archiving and storing emails including attachments in the existing email format and folders, whilst protecting existing email security standards.

Enables end-users to easily retrieve archived documents easily and quickly from their email client.

The solution to enable email legal compliance.

The solution to automate company's file size allocation rules.

'Fixed Price' \$43,000

Plus Expenses - Quote Ref:ECA01USA

Monthly Financing Options Available!

eMail Archiving & Compliance (Lotus Notes or Microsoft Exchange eMail Archive)

IBM's CommonStore for Lotus Domino and Exchange enables customers to archive emails and attachments from Notes or Exchange databases to a secured low cost archive repository for long-term low cost storage and immediate retrieval providing the first step in email compliance. File attachments can also be separately archived from their originating email messages to provide immediate mass disk savings. Some customers have enjoyed up to 80% disk saving just from attachment archiving. This is a particularly useful function given that email attachments are the biggest email storage space consumer.

CommonStore with IBM Content Manager off-loads all types of documents from scanned images to word processor files. The software will offload the chosen document from your email server to Commonstore and will retrieve and display them directly from a Lotus Notes or the Exchange client. Users can even display attachments right from a web browser, not having to reload to the Lotus Domino and or Exchange database.

We have not included a storage device within this offering as many customers have existing storage solutions that could be used, such as an existing tape or optical storage. We would be pleased to provide low cost large volume storage designs and costing that meet your archive space and performance needs if required.

We provide an end to end eMail Compliance & Archiving Solution.
